Rethink Resilient Floor Replacement Bona Resilient Solution

Introducing the Bona Resilient Solution. An innovative, sustainable and highly effective system to renew and extend the life of linoleum, PVC, vinyl, PU, rubber or LVT floors.

Even with enhanced recycling efforts, replacing a floor means landfills receive the majority of non-biodegradable flooring material. With new government regulations to reduce our carbon footprint along with individual organisations' commitment to CSR goals, helping your facility reduce its environmental impact is a top priority and Bona + Look Floors can help.

Floor renewal is the eco-friendly solution and is being adopted by facilities all over the world. The Bona Resilient System can help contribute to your environmental goals by reducing CO2 and energy savings by up to 90%.

**Over 1 Million m² coated

Sustainability At The Forefront

In a study conducted by the IVL Swedish Environmental Research Institute, they found that renewing with the Bona Resilient Floor Solution rather than replacing a resilient floor results in 90% savings in both energy and reduced carbon footprint.

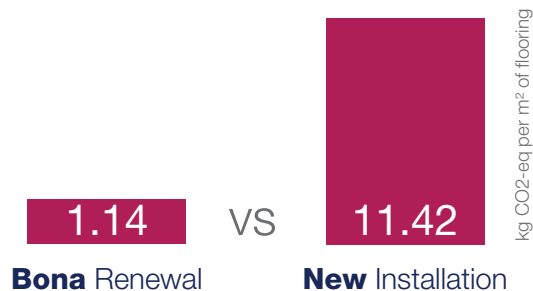

Swedish Environmental Research Institute Report; 2020

* based on estimations

The **System Basis**

1. **Repair** - Use Bona PU Filler for a quick and durable fix to an imperfect surface
2. **Polish Removal** - Use Bona PowerRemove R to dissolve the old coat/polish
3. **Prepare Key Surfaces** - Use the Bona Flexisand + Diamond Abrasives to remove the old wear layer
4. **Neutralise** - Use the Bona Powerscrubber to neutralise and clean the surface
5. **Bona Resilient Application** - Use Bona Pure Colour and Bona Pure clear lacquer to provide a wear layer for a perfect finish
6. **Job Done** - Enjoy your new, easy care flooring!

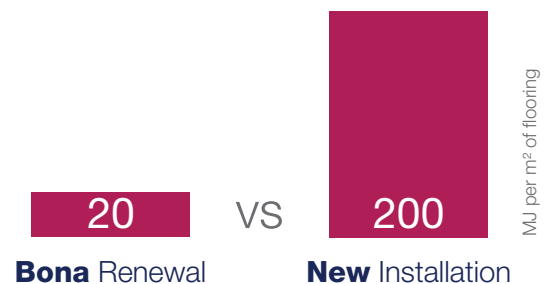

CO2 Savings

A renewed resilient floor has an impact on climate change of 1.14 kg carbon dioxide equivalents per m². Compared to a newly installed floor that uses an average of 11.42.

This shows a carbon footprint that is more than 10x lower than a newly installed floor. The assessment included all products used, electricity, consumables, waste treatment and transport.

Energy Savings

These results show that the use of energy resources can be significantly reduced, since renewal allows continued use of already available flooring materials.

With a renewal the total use of primary energy resources is 20 MJ/m². This takes into consideration the production of raw materials, resources and trips made by the craftsman. Compared to installation of a new floor, where the energy use is a total of 200 MJ/m², the savings are 90%.

Be a **Certified Bona Resilient Applicator**

Look Floors is Bona certified to train new applicators to apply Resilient Systems. The Trained & Certified Bona Resilient Applicators follow the correct process to achieve your new hygienically enhanced, hard wearing, eco-friendly floor that, if treated correctly, will give you years of hassle-free performance and maintenance cost savings.

The team at Look Floors work very closely with the Bona Certified Applicators. Look Floors will assist you with product specification, making project management easy and ensuring your projects run as seamlessly as possible.

A World of Possibilities

With Bona's Resilient System, there are no limits. Restoring your floor to its former beauty couldn't be easier or more effective when following this unique treatment program. From changing the colour or design of an existing floor, to full renovation including hard-to-reach areas, you can rely on Bona for an outstanding result.

Tackle Challenging Areas

Thanks to the outstanding flexibility of the Bona Resilient System, uneven surfaces and hard-to-reach areas, such as stairs, corners and round studded floors are no longer a challenge.

Restore & Redesign on Demand

Whether it's the replacement of worn markings on a sports floor, or a timely interior design update, the Bona Resilient System offers a complete range of RAL/NCS colours for resilient surfaces.

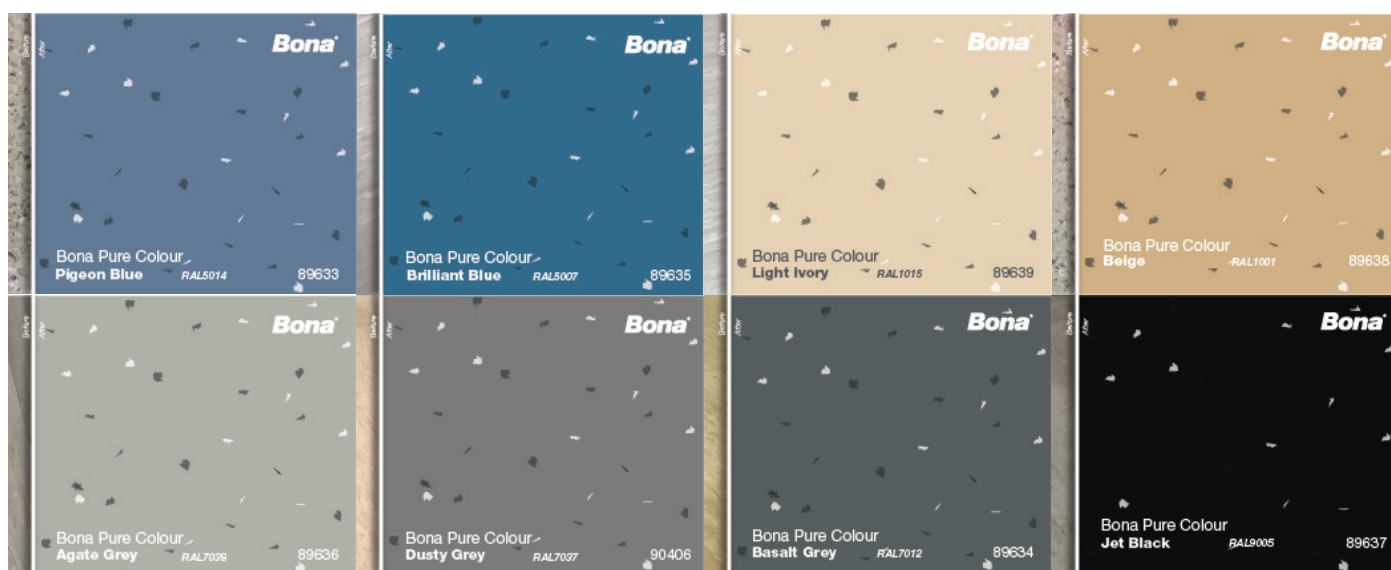

For floors with interest, create unique design effects using Bona Creative Chips.

Creative Chips are available in Salt & Pepper, Black & White and Terramix.

City Fitness Changing Room

The vinyl was in very good condition, however, the client wanted was a change in appearance.

Any design aesthetic can quickly become out of date. With Bona Resilient this is made more cost effective and environmentally friendly with this durable and easy coating system.

The flexibility of application also meant that there was no need to take apart bathroom partitions and re install them, for a reduction in labour. Bona PU filler was used to repair the minor damage and the rest was refreshed with process of Bona Resilient.

As this is a community fitness centre, time restraints were in place, so to allow for minimal disruption, this project was completed over 2 days.

Project Management: Look Floors

Project size: 40m²

Contractor: Complete Flooring

Equipment used: Bona Powerscrubber, Bona Flexisand, Bona Diamond Disc Abrasives, Bona Roller

Product used: Bona PU Filler, Bona PowerRemove R, Bona Pure Colour - Basalt Grey (2 coats), Bona Creative Chips – Salt & Pepper, Bona Pure Extra Matt (2 coats).

Community Centre

This Community Centre was in need of an uplift but had a tight budget to work with.

Two ablution blocks and one large kitchen were in need of a renovation. Bona Resilient was a great solution this clients situation.

The kitchen in particular was in need of some major repairs to the vinyl. A strip drain was removed and an underfloor pipe was installed. The vinyl used to patch the floor was Tarkett, it was aged and faded but still in a suitable condition for the application.

The final result of the Bona Resilient application gives no indication there were two types of vinyl, leaving the job with a seamless finish that is more hard wearing than your standard commercial vinyl.

The range of specially designed brushes!

Project size: 60m²

Contractor: Complete Flooring Ltd

Equipment used: Bona Powerscrubber, Bona Flexisand, Bona Diamond Disc Abrasives, Bona Roller.

Product used: Bona PU Filler, Bona Remove R, Bona Pure Colour - Basalt Grey (2 coats), Bona Creative Chips, Bona Pure Extra Matt (2 coats).

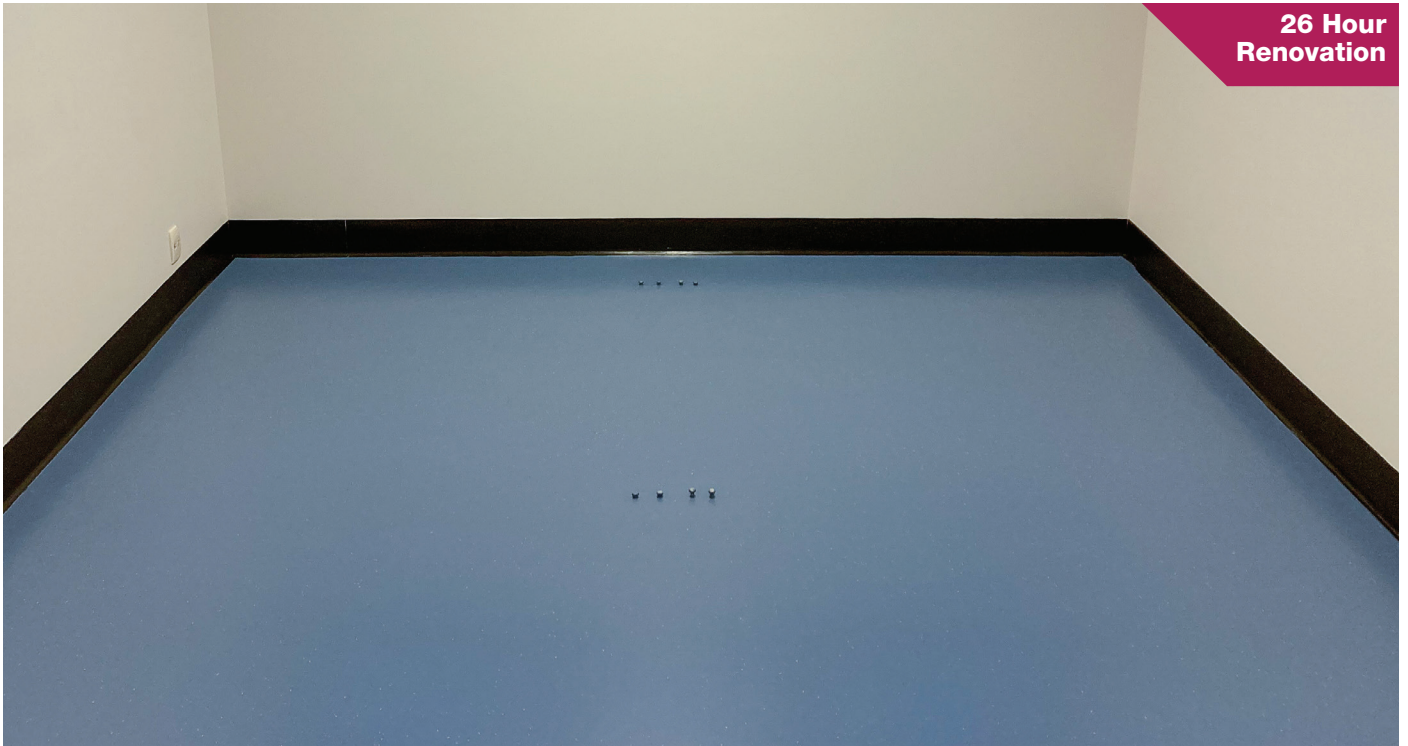

Maintenance: No use of polishes, toxic polish removers, or buffing. We recommend the Bona spray mop or neutral cleaners to extend the longevity of the floor. Extend your warranties with a maintenance coat every 3 -5 years depending on traffic type.

Government Dept.

**26 Hour
Renovation**

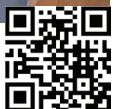

This Government Department Floor was looking tired and badly worn.

Red & Black Carpet Cleaning Ltd (MRPD Flooring) gave this damaged and heavily worn floor a new lease of life with Bona's effective re-coating treatment.

Bona Resilient renovation has saved time compared to installing a new floor, with only partial floor repairs needed. This has left a durable, seamless finish with minimal downtime required and the advantage of a new look on demand has allowed the client to step in to a brand new room.

Project size: 80m²

Contractor: Red & Black Carpet Cleaning Ltd (MRPD Flooring)

Equipment used: Bona Powerscrubber, Bona Flexisand, Bona Diamond Disc Abrasive, Bona Roller.

Product used: Bona PU Filler, Bona Remove R, Bona Pure Colour, Bona Creative Chips, Bona Pure Extra Matt (2 coats).

Maintenance: No use of polishes, toxic polish removers, or buffing. We recommend the Bona spray mop or neutral cleaners to extend the longevity of the floor. Extend your warranties with a maintenance coat every 3 -5 years depending on traffic type.

Easy Re-Colour

It was going to be a costly exercise to replace the vinyl given that they had just had it installed, not to mention an ecological waste in regard to unnecessary landfill.

The client had new vinyl laid recently, however, given the type of foot traffic, the light coloured flooring was showing dirt and foot marks from work boots which gave the appearance of always being dirty. This meant that the client had to clean constantly which was not ideal.

Holmes Flooring was approached by the client and advised on a better option given their situation. Holmes Flooring knew it would be more cost-effective and less disruptive to re-colour the surface with Bona Resilient. The client selected a darker Bona Resilient Colour that would solve the problem, Holmes Flooring prepared & applied the Bona Resilient system in no time with virtually no disruption to the client.

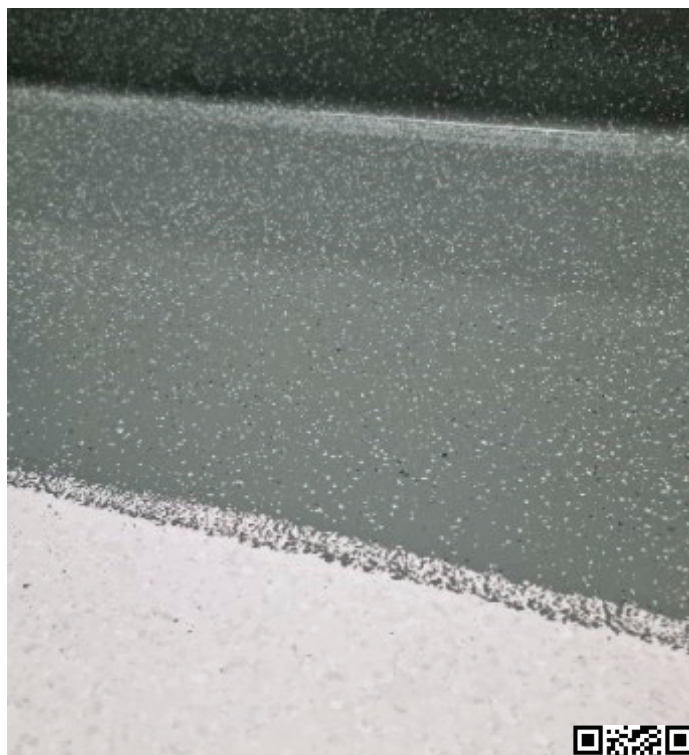

The Process:

1. Deep clean and wet abrade using Bona Remove-R and the Bona Flexisand.
2. Neutralise surface with the Bona Power Scrubber and fresh water.
3. Dry Abrade with the Bona Flexisand with Bona Diamond 120grit.
4. Apply the Bona Resilient System:
 - 2 Coats of Bona Pure Colour - Basalt Grey with Salt & Pepper Creative Chips
 - 2 coats of Bona Pure - Extra Matt

Maintenance: No use of polishes, toxic polish removers, or buffing. We recommend the Bona spray mop or neutral cleaners to extend the longevity of the floor. Extend your warranties with a maintenance coat every 3 -5 years depending on traffic type.

Fonterra Changing Rooms

**3.5 Day
Renovation**

Fonterra's commitment to reducing their carbon footprint and minimising landfill was the biggest reason for choosing Bona Resilient.

The size of this Hamilton project area meant an extensive amount of time was needed to up keep the floor to a fresh standard, so by recoating with the Resilient System, future maintenance can be better appreciated.

Areas such as this are prone to heavy wear, stubborn stains and residue build up over time, resulting in tired, dull surfaces. An application of Bona PowerRemove R, with the Bona PowerScrubber resets resilient floors, preparing the surface for the rest of the system.

The existing vinyl was in good condition, with only approximately 2m² of commercial vinyl used for repairs, along with PU Filler on some joins and mitres.

The flexibility of the system meant that the contractor didn't have to remove partitions and could easily coat challenging corners, saving time and keeping cost to a minimum.

Product used: Bona PU Filler, Bona Power Remove, Bona Pure Colour - Agate Grey (2 coats), Bona Creative Chips – Salt & Pepper, Bona Pure Matt (2 coats).

Maintain with a Bona Spray Mop! Simple, fast & effectively removes grime with its gentle microfiber pad.

Show Room Revamp

Coating concrete with Bona Resilient allows for a desirable finish that will last against wear and traffic.

Maintaining public spaces depends on a number of factors, particularly on the amount of traffic. The excellent durability in Bona Resilient Solution ensures long-lasting protection even in heavily frequented areas. In addition, The Bona Resilient Solution eliminates the time-consuming and laborious task of laying new vinyl.

For this project, once the concrete had been repaired with ARDEX Feather Finish, the surface was ready to be prepared for coating.

First, the floor was sanded using the Bona Flexisand with Bona Diamond Abrasives.

Next, left over residue was removed with the Bona Powerscrubber and water for a clean surface.

Two coats of Bona Pure Colour - Basalt Grey were applied, using a Bona Microfiber roller for optimal application.

The surface was then sprinkled with Bona Creative Chips - Salt & Pepper, using a **Strongbond Flake Spreader - product code: 90714**.

Finally, two coats of Bona Pure Extra Matt were applied to add a durable finish to the floor, providing many more years of extended use.

Create Personalised Spaces

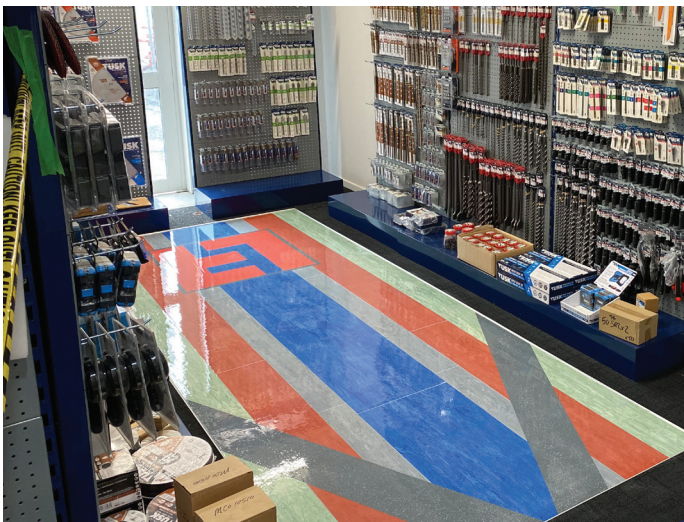

Look Floors - 1/23 Creek Street, Drury AKL

The fast, simple, more stylish alternative to polished concrete.

Installing over different finishes isn't an issue with the Bona Resilient System. Using two coats of Bonafide on concrete areas before applying Bona Pure Colour in various shades as well as Bona Creative Chips, can create an endless range of designs.

See for yourself at the Look Floors show rooms!

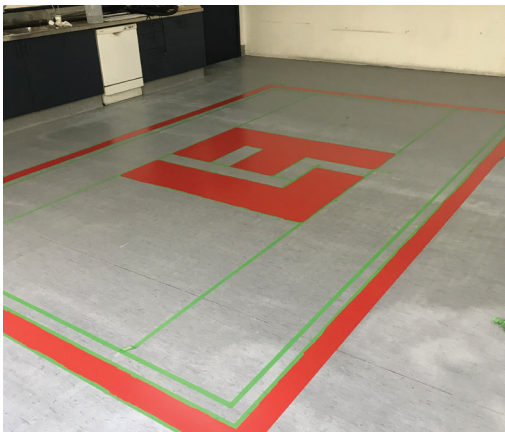

Look Floors - 40B Maleme Street, Tauranga

Design created to demonstrate the versatility of Bona Resilient.

90% of all vinyl problems occur at the seam. This is solved by using PU filler and coated with Bona Resilient. Left over waste vinyl was saved from the rubbish to create this design and all floor coverings were supplied by Look Floors.

Installed by: Kane Ireland, Look Floors

**16 Hour
Renovation**

The extensive colour range allows unique design opportunities.

This design was installed during a Look Floors x Bona Resilient Certification course at the Look Floors Wellington Training Centre. Multiple coats of polish were removed renovating this old kitchen floor.

The **Premium Spray Mop**

For the best solution to keeping your floor clean and fresh, use a Bona Spray Mop. Its streak free formula is safe for children and pets, effectively removing stains and dirt without water. Equipped with a refillable cartridge and microfiber pad that is washable up to x500.

Middlemore Hospital - X-Ray Room

Bona Resilient was specified by Look Floors. A seamless finish = no bacteria build up.

Look Floors took the opportunity to demonstrate how quick and efficiently they could transform a worn vinyl floor into a floor which looks brand new, and at the same time seal the surface against micro-organisms.

The full process from cleaning, to repairing and preparing the floor for four coats was 16 hours. There was no dust, no overpowering odours and no uplifting of vinyl. Bona Resilient provided a solution that was easier, more efficient, reduced downtime and a healthier more sustainable solution overall.

The resulting floor finish looks refreshed, revived and completely seamless to produce a floor of the highest level of hygiene standards adhered to by the rules of The Technical Rules or Biological Agents (TRBA), which was crucial for the hospital floor.

Project Management: Look Floors

Project size: 25m²

Contractor: Top Surfaces Ltd

Equipment used: Bona Powerscrubber, Bona Flexisand, Bona Diamond Disc Abrasive, Bona Roller.

Product used: Bona PowerRemove R, Bona Pure Colour - Agate Grey (2 coats), Bona Pure Extra Matt (2 coats), Bona Clean R50.

Maintenance: No use of polishes, toxic polish removers, or buffing. We recommend the Bona spray mop or neutral cleaners to extend the longevity of the floor. Extend your warranties with a maintenance coat every 3 -5 years depending on traffic type.

Gisborne Hospital

8 Hour
Renovation

This Emergency Department faced the dilemma of needing to repair the floor without closing down the department or creating excessive noise, dust or fumes.

Two cubicles were due for renovation and Bona Resilient was the perfect solution, as the installation could safely be carried out while the ward was still open to patients. The new floor provides a hygienic, durable surface suitable for urgent care facilities. Working from 7am to 3pm, the floor was ready for full use by 9am the following day.

Recreation Centre

The existing vinyl floors were scratched, marked and discoloured requiring repair and replacement due to many years of intensive use.

To uplift, dump and replace the existing vinyl would have taken significant time and cost, with the sub floor also requiring a large amount of preparation. This would have also impacted the overall total refurbishment timeline of the Recreation Centre.

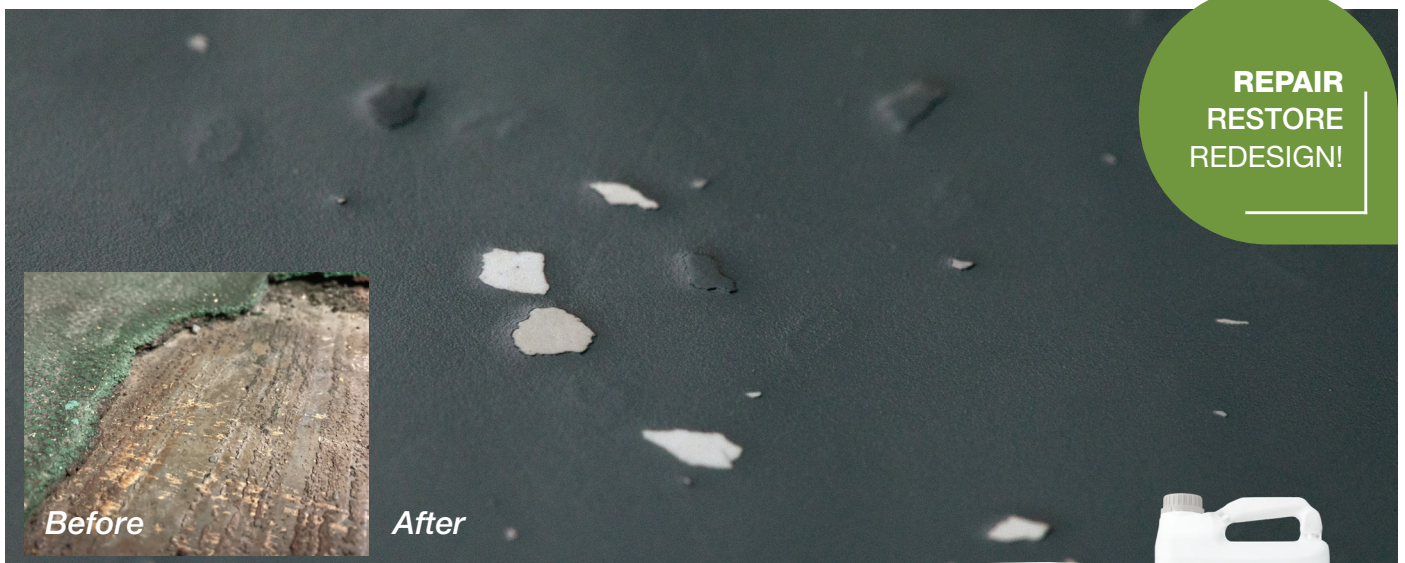

The ground level vinyl floors were sanded using the Bona Alox and diamond abrasive pads, Bona Flexisand, Bona Supraflex, Bona Power Scrubber and Bona Power Remove solution to strip away the old polish. Repairs to the welds, joins, coves and floor patching were carried out using the Bona PU Filler. The floor was then re-coated

with Bona Pure Colour Basalt Grey and enhanced with the Bona Creative Chips sprinkled into the coating. Two coats of Bona Pure Matt were applied over the Bona Pure Colour resulting in a new durable surface to meet the usage requirements of the recreation center.

The upper mezzanine floor was badly worn and damaged. The existing rubber flooring was removed back to the concrete sub floor. The concrete sub floor was ground in readiness to coat the floor with the Bona Resilient System. The floor was then coated to match the ground level. This provided a uniform look and performance to the floor between the two levels on differing substrates of both vinyl and concrete.
